andrew@hunt.codes
@amhunt

My expertise is in frontend infrastructure, component systems, and web performance. I ship product features, developer tooling, and large-scale migrations, and partner with design to build systems that make shipping product faster and less error-prone.

Skills

Languages & frameworks	TypeScript, JavaScript, React, GraphQL (Apollo Client), Material UI, Tailwind, Linaria, D3, Three.js, Accessibility (WCAG)
Infrastructure & CI/CD	Vite, Rsbuild, Webpack, pnpm, GitHub Actions, Docker, S3, Cloudflare, LaunchDarkly, Sentry, Segment
Testing & tooling	Vitest, Jest, React Testing Library, Storybook, Chromatic, Datadog Synthetics, ESLint, jscodeshift, ts-morph

Experience

Independent Software Consultant — Argos

San Francisco + Remote · 2025 – Present

- **Build the frontend for Argos's legal AI product**: agentic chat, document management, and D3/Three.js visualizations.
- **Advise product teams** on frontend performance, monorepo architecture, and developer tooling.

Staff Software Engineer — Zip

San Francisco, CA · 2021 – 2025

- **Led the Frontend Platform team**: set architecture and migration priorities and owned build and release infrastructure (Webpack, GitHub Actions, Docker, S3, Cloudflare).
- **Led an 8-person team rebuilding Zip's Request Details Page**, Zip's most-viewed and most-acted-on page, consolidating multiple tabs into a single page. Structured GraphQL fragments around data shared with 8+ referring pages to reuse the Apollo cache, and prioritized queries for the section users landed on. **Cut p90 time-to-usable from 5.3s to 2.1s for users arriving from Search.**
- **Eng lead for Brand 2.0**: rebuilt much of the core component library, simplifying APIs and retiring duplicate implementations.
- **Shipped Brand 2.0 incrementally** behind feature flags with per-brand Chromatic checks, **migrating 1,100+ files** to the new component library.
- **Drove TypeScript type coverage to 99%**, building tooling that flagged direct or nested any in identifier types and tracked each team member's quarterly contributions toward the shared type-safety goal.
- **Built Zip's frontend CI**: type-coverage gates, Jest, bundle-size tracking (Webpack/Rsbuild), and Chromatic visual regression on components and pages.

Senior Software Engineer Untapped (fka Jumpstart)

San Francisco, CA · 2020 – 2021

- **Oversaw the Frontend Platform group**, owning quality, performance, and developer tooling across product teams.
- **Cut the core app's p95 Time to Interactive by 40%** through caching, code splitting, and prefetching.
- **Introduced and evangelized TypeScript across the company** and established shared coding standards.
- **Built and launched Recruiter Analytics**, interactive D3 reports for enterprise customers.

Senior Software Engineer Airbnb

San Francisco, CA · 2017 – 2020

Software Engineer 2017 – 2019 → Senior Software Engineer 2019 – 2020

- **Shipped dozens of pricing and availability features** across the Experiences Host and Guest products.
- **Ran 20+ A/B tests** that compounded to a >10% lift in Experiences bookings.
- **Cut load times >30% across 10+ pages** via code splitting.
- **Migrated the Experiences Host app to TypeScript**, reducing customer-reported frontend bugs by ~30%.

Education

Princeton University BSE, Computer Science

2013 – 2017

- CS Teaching Assistant · Innovation Magazine 25 Under 25.

Interests

3D Printing · Singing · Easter Eggs · Music Production
